

Remote Dashboard

Smarter. Safer.
Portable.

Remote Dashboard offers convenient, adaptable, location-independent, safer viewing and interaction with your important VISION data.

Create and display customized virtual dashboards on secondary displays or virtually any device connected to the same network. Remote Dashboard is platform independent and only requires a HTML 5 compatible browser.

Remote Dashboard provides much more functionality than displaying data. Advanced features such as Action Buttons, Recorder Panel and Script panel provide simple, intuitive touch interaction with VISION.

Make calibration changes, control recorders and run scripts without the distraction of a keyboard and mouse.

- Access VISION data remotely
- Customize virtual dashboards for secondary displays, including tablets and smartphones
- Execute common VISION software functions independent of location
- Monitor multiple remote locations at once
- Reduce in-vehicle distractions - improve user safety
- Convenient, easy to use and fully secure
- Adjust multiple calibration parameters with just one touch or with no-touch GPS triggered automation

Download Remote Dashboard Connect for use with
VISION Calibration and Data Acquisition Software 5.0.
